

CONTROL IT!

Complete Control, Llc

February 2018

The Solution is Here

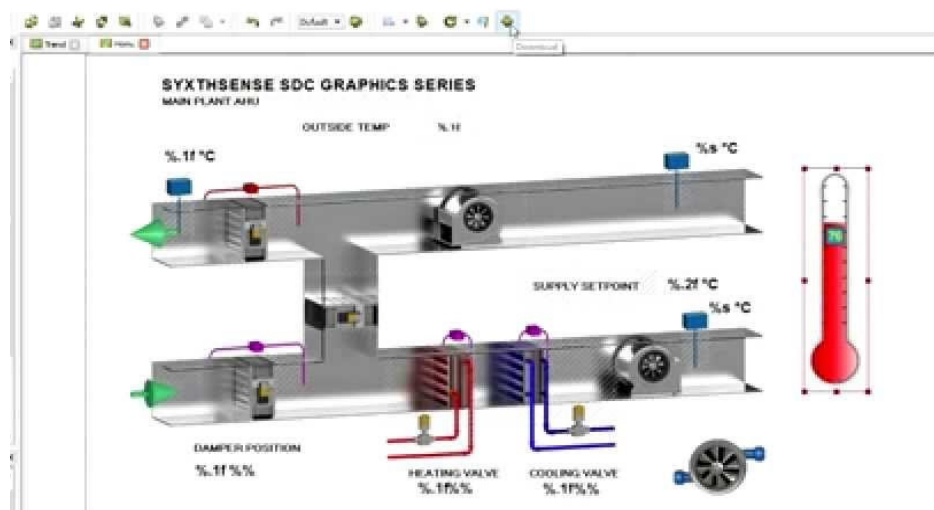

How is your building HVAC, lighting, and tenant billing being handled? Most small to medium sized buildings have not invested in a Building Automation System. The payback analysis just couldn't show a good return due to the high initial costs to own a commercial grade control system. Most building automation systems are tiered the following way:

- Server or Management Level—Where you interact with the system, by sending commands, creating trendlogs, alarms, and reports.
- Integration Level—Most of the programming is done here. This is also used as a gateway between the server and the unitary controllers.
- Field Controller or Unitary Controller Level—This controls your mechanical equipment like pumps or air handler units, and receives inputs from your sensors.
- Sensor Level—These are your thermostats, temperature, pressure, and flow sensors. These are needed to be checked periodically to make sure your equipment is running at its optimal efficiency.

“Our controllers are servers, integrators, and field controllers in one, at a fraction of the price.”

Q: What if you could have all these features in one controller?

Our controllers are servers, Integrators, and field controllers in one, at a fraction of the price. We will install and program the devices for you. You will have the power to modify your equipment as you see fit. The software belongs to you, at no extra cost.

Standard graphic easily created and saved in the controller.

THIS MONTH

- Small to medium sized buildings
- Expandable systems
- Easy to control program
- Next month—Tenant Billing, Warehouse temperature and humidity control, and saving energy!

DRIVES AND ACTUATORS

All of our techs are ABB and Danfoss certified and have in depth knowledge of installation practices. Our licensed electricians have years of experience installing drives in conditioned and unconditioned spaces. If you need, we can assist in connecting your new drive to your existing Energy Management System. We offer certified startup, which will extend the warranty of your new drive. Not sure which drive you need, send us the motor data and we can assist!

We offer Belimo actuators and energy valves. If you need help with the installation or replacement of your valves and actuators, give us a call. We can help size your new valve. If we don't have it in stock, we can get it for you quickly.

HOPE TO HEAR FROM YOU!

This month we covered what some of our integrated controllers can accomplish. For more information, please send us a note from the website, visit us on Facebook, Twitter, give us a call, or send us an email.
